About Surface Prep!

Surface Prep! is centrally located to the New York tri-state area region.

Our professional office and estimating staff are on hand at all times. We also retain a fully equipped fleet of vehicles including a **24 foot Hino box truck with a 125kw electric generator built in**. This self-contained unit allows work to be completed in a timely manner with virtually zero downtime due to a power shortage on site.

In addition to all other accoutrements needed to provide a quality installation, our major on site floor preparation equipment includes:

- Shotblasters
- Scarifiers
- Floor Buffers
- Chipping Guns
- Dust Free Diamond Grinders
- Prep Master's Terrazzo Grinders / Concrete Polishing

Epoxy Flooring

Surface Prep! realizes that your floors take more abuse than any other building component. Spalling, deteriorating joints, dusting, rolling traffic, chemical attack, impact and harsh cleaning solutions all take their toll on a floor.

Our flooring systems can solve these problems by providing a light-reflective, low-maintenance wearing surface, color-coordinated to your company's specifications and offering years of worry-free service.

Epoxy Flooring Solutions

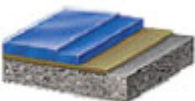

Primers & Sealers: The best flooring systems begin with a low-viscosity epoxy or acrylic primer coat that penetrates, seals and reinforces concrete floors prior to resurfacing.

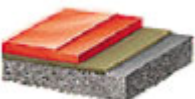

Membranes & Crack Fillers: In areas where containment and stress relief head the list of priorities, an elastomeric waterproofing membrane is an ideal foundation layer.

Resurfacers: Clear or pigmented epoxy binders fuse with multi-colored or natural quartz. These fast curing Acrylic (MMA) Systems combine the benefits of an ultra fast cure with UV stability, which makes them perfect for exterior or cold interior environments.

Performance Top Coats: The perfect finish for epoxy or methyl methacrylate flooring systems, a performance topcoat makes your floors more chemical-resistant and abrasion-resistant while imparting a high-gloss, low-glare satin, or flat finish, depending on your preference.

Coatings for Floors & Walls: Quality resins are the key components in any flooring system. High-strength, abrasion-resistant, epoxy or acrylic coatings can be further enhanced with Bio-Pruf® antimicrobial treatment, corrosion and heat-resistant Novolac™ and other special formulations.
